01 / Claim

What capability are we testing, under which conditions?

EX01 / ALOHA / ACT | Source analysis | C1 | P: paper; W: project; R: repository

ALOHA demonstrations let ACT learn selected fine bimanual tasks from limited task-specific data.

1. System and capability

Name your system, tested capability and physical mechanism. Separate your proposed claim from published results.

Two follower arms perform fine manipulation; ACT predicts action chunks from images and joint states. [P III-IV]

2. Conditions and boundary

State task, configuration, conditions and exclusions. Use Project development for your own final project.

Selected tabletop tasks and object placements; this is the published system, not our own implementation. [P V]

3. Measure and comparison

Define measure, units, trial unit, criterion and comparator before evaluation. Label proposed versus observed values.

Metric: task-success percentage; compare ACT and imitation baselines using the same task resets and trial accounting. [P V-VI]

4. Purpose and next test

Select one feasible pilot and check resources/access. State what outcome would challenge the claim; results may be pending.

Test whether chunking helps beyond hardware quality: compare with a single-step policy using identical demonstrations. [P VI]

Review: Could your system work as shown while your claim is still false? Write one such outcome.

Example response: Yes: the arms can move correctly while the cup stays closed.

Worksheet 1 / Claim – evidence and team review

EX01 / ALOHA / ACT | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX01 Project: ALOHA / ACT Claim ID: C1 Revision: draft 1

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: paper sections and public documentation; no dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/abs/2304.13705v1	Paper: method/results; reported evidence, not our measurement.
W	tonyzhaozh.github.io/aloha	Project: system/videos; selected examples do not establish reliability.
R	github.com/tonyzhaozh/act	Repository: documented route; code and data not executed or audited.

Next action / owner / verification:

Yes: the arms can move correctly while the cup stays closed. Reviewer: inspect the cited basis before adapting this answer.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.

1. Name / student ID: _____

Signature: _____ Date: _____

2. Name / student ID: _____

Signature: _____ Date: _____

3. Name / student ID: _____

Signature: _____ Date: _____

4. Name / student ID: _____

Signature: _____ Date: _____

5. Name / student ID: _____

Signature: _____ Date: _____

6. Name / student ID: _____

Signature: _____ Date: _____

7. Name / student ID: _____

Signature: _____ Date: _____

8. Name / student ID: _____

Signature: _____ Date: _____

P/W/R identify linked public sources above. NE: not examined in this brief example, not evidence of failure. Support/context labels are provisional, not grades.
