01 / Claim

What capability are we testing, under which conditions?

EX05 / LEAP Hand | Source analysis | C1 | P: paper; W: project; R: repository

A low-cost anthropomorphic hand supports selected manipulation and robot-learning workflows.

1. System and capability

Name your system, tested capability and physical mechanism. Separate your proposed claim from published results.

A redesigned finger mechanism enables useful dexterity across finger poses. Separate platform and learned-task claims. [P]

2. Conditions and boundary

State task, configuration, conditions and exclusions. Use Project development for your own final project.

Original LEAP Hand v1 and the reported tasks; later hand versions and software are separate evidence. [P; W]

3. Measure and comparison

Define measure, units, trial unit, criterion and comparator before evaluation. Label proposed versus observed values.

Platform measures include dexterity, force and repeatability; reported hardware cost is about USD 2,000, compared with Allegro. [P; W]

4. Purpose and next test

Select one feasible pilot and check resources/access. State what outcome would challenge the claim; results may be pending.

Next test: evaluate one object-rotation task with declared resets and success/drop criteria. [W Sim2Real]

Review: Could your system work as shown while your claim is still false? Write one such outcome.

Example response: Finger dexterity can improve while a selected object still drops.

Worksheet 1 / Claim – evidence and team review

EX05 / LEAP Hand | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX05 Project: LEAP Hand Claim ID: C1 Revision: draft 1

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: paper sections and public documentation; no dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/abs/2309.06440	Paper: method/results; reported evidence, not our measurement.
W	v1.leaphand.com	Project: system/videos; selected examples do not establish reliability.
R	github.com/leap-hand/LEAP_Hand_API	Repository: documented route; code and data not executed or audited.

Next action / owner / verification:

Finger dexterity can improve while a selected object still drops. Reviewer: inspect the cited basis before adapting this answer.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.

1. Name / student ID: _____

Signature: _____ Date: _____

2. Name / student ID: _____

Signature: _____ Date: _____

3. Name / student ID: _____
