01 / Claim

What capability are we testing, under which conditions?

EX06 / NeuralFeels | Source analysis | C1 | P: paper; W: project; R: repository

Vision, touch and proprioception improve object tracking and reconstruction during selected in-hand interactions.

1. System and capability

Name your system, tested capability and physical mechanism. Separate your proposed claim from published results.

Contact images and vision constrain an online object shape/pose representation. [P 1,4]

2. Conditions and boundary

State task, configuration, conditions and exclusions. Use Project development for your own final project.

In-hand rotation of selected objects; unknown-shape reconstruction and known-shape tracking are different settings. [P 2]

3. Measure and comparison

Define measure, units, trial unit, criterion and comparator before evaluation. Label proposed versus observed values.

Use ADD-S pose error in mm and reconstruction F-score; compare vision-only with visuo-tactile processing. [P 2.1]

4. Purpose and next test

Select one feasible pilot and check resources/access. State what outcome would challenge the claim; results may be pending.

Next test: compare modalities on the same occluded sequence using the same reference pose. [P 2.4]

Review: Could your system work as shown while your claim is still false? Write one such outcome.

Example response: Tracking can improve without improving the underlying rotation controller.

Worksheet 1 / Claim – evidence and team review

EX06 / NeuralFeels | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX06 Project: NeuralFeels Claim ID: C1 Revision: draft 1

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: paper sections and public documentation; no dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/abs/2312.13469v1	Paper: method/results; reported evidence, not our measurement.
W	suddhu.github.io/neural-feels	Project: system/videos; selected examples do not establish reliability.
R	github.com/facebookresearch/neuralfeels	Repository: documented route; code and data not executed or audited.

Next action / owner / verification:

Tracking can improve without improving the underlying rotation controller. Reviewer: inspect the cited basis before adapting this answer.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.

1. Name / student ID: _____

Signature: _____ Date: _____

2. Name / student ID: _____

Signature: _____ Date: _____

3. Name / student ID: _____

Signature: _____ Date: _____

4. Name / student ID: _____

Signature: _____ Date: _____

5. Name / student ID: _____

Signature: _____ Date: _____

6. Name / student ID: _____

Signature: _____ Date: _____

7. Name / student ID: _____

Signature: _____ Date: _____

8. Name / student ID: _____

Signature: _____ Date: _____

P/W/R identify linked public sources above. NE: not examined in this brief example, not evidence of failure. Support/context labels are provisional, not grades.
