# 01 / Claim

What capability are we testing, under which conditions?

**EX02 / UMI | Source analysis | C1 | P: paper; W: project; R: repository**

Handheld UMI demonstrations can train robot policies when sensing, pose representation and timing are aligned.

## 1. System and capability

Name your system, tested capability and physical mechanism. Separate your proposed claim from published results.

A handheld gripper generates physical demonstrations for later robot execution. [P Hardware; W]

## 2. Conditions and boundary

State task, configuration, conditions and exclusions. Use Project development for your own final project.

Selected manipulation tasks and robot configurations; success does not imply transfer to every robot or scene. [P Experiments]

## 3. Measure and comparison

Define measure, units, trial unit, criterion and comparator before evaluation. Label proposed versus observed values.

Cup collection example: 111 demonstrations/hour versus 35/hour with SpaceMouse. This measures throughput, not robot task success. [W]

## 4. Purpose and next test

Select one feasible pilot and check resources/access. State what outcome would challenge the claim; results may be pending.

Next test: compare the same learned task with and without latency matching, keeping data fixed. [P Policy design]

Review: Could your system work as shown while your claim is still false? Write one such outcome.

Example response: A plausible gripper trajectory can still yield an unsuccessful robot placement.

# Worksheet 1 / Claim - evidence and team review

EX02 / UMI | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX02  Project: UMI  Claim ID: C1  Revision: draft 1

Mode: Source analysis  Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: paper sections and public documentation; no dataset download or independent experiment.

| Evidence ID | Artifact/source + location (clickable) | What it supports; limitation / access gap |
|---|---|---|
| **P** | arxiv.org/abs/2402.10329v1 | Paper: method/results; reported evidence, not our measurement. |
| **W** | real.stanford.edu/umi | Project: system/videos; selected examples do not establish reliability. |
| **R** | github.com/real-stanford/universal_manipulation_interface | Repository: documented route; code and data not executed or audited. |

**Next action / owner / verification:**

A plausible gripper trajectory can still yield an unsuccessful robot placement. Reviewer: inspect the cited basis before adapting this answer.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.

1. Name / student ID: _____

Signature: _____ Date: _____

2. Name / student ID: _____

Signature: _____ Date: _____

3. Name / student ID: _____

Signature: _____ Date: _____

4. Name / student ID: _____

Signature: _____ Date: _____

5. Name / student ID: _____

Signature: _____ Date: _____

6. Name / student ID: _____

Signature: _____ Date: _____

7. Name / student ID: _____

Signature: _____ Date: _____

8. Name / student ID: _____

Signature: _____ Date: _____

P/W/R identify linked public sources above. NE: not examined in this brief example, not evidence of failure. Support/context labels are provisional, not grades.
