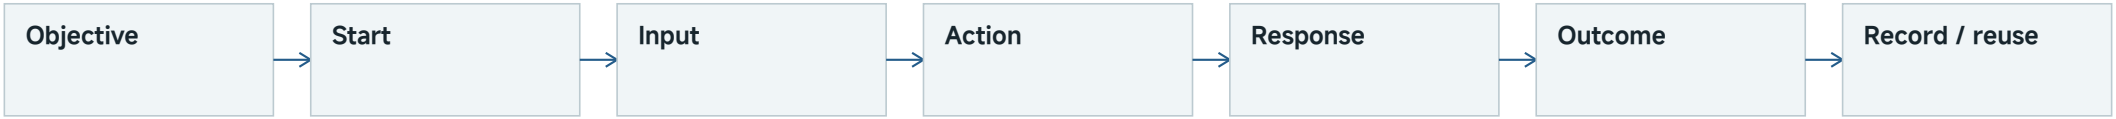
02 / Experience

What interaction data does one episode generate, and how will we use them?

EX05 / LEAP Hand | Source analysis | C1 | P: paper; W: project; R: repository



1. Objective and start

Link the claim, episode start/reset and end rule. Label this episode planned, team-observed or externally reported.

Example: place an object in the hand, execute a rotation attempt and end on completion or drop. [W]

2. Input and action

Identify observations, timestamps, commands and executed actions where known. Distinguish command from response.

Joint commands and reported motor states describe the hand; object orientation needs an appropriate separate observation. [R]

3. Response and outcome

Record response, outcome rule, failures, timeouts and interventions. A selected success does not establish reliability.

A moving finger does not prove object rotation. Record drops, resets and operator intervention. [W]

4. Record and reuse

List the retained interaction data: observations, actions, responses, outcomes and context. State intended use and missing fields.

Simulation rollouts support policy training; physical interaction records are needed for physical task reliability. [W]

Review: What could make the recorded outcome misleading? Mark missing measurements or an alternative explanation.

Example response: A commanded rotation can be mistaken for measured object motion.

Worksheet 2 / Experience - evidence and team review

EX05 / LEAP Hand | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX05 Project: LEAP Hand Claim ID: C1 Revision: draft 1

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: paper sections and public documentation; no dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/abs/2309.06440	Paper: method/results; reported evidence, not our measurement.
W	v1.leaphand.com	Project: system/videos; selected examples do not establish reliability.
R	github.com/leap-hand/LEAP_Hand_API	Repository: documented route; code and data not executed or audited.

Next action / owner / verification:

A commanded rotation can be mistaken for measured object motion. Reviewer: inspect the cited basis before adapting this answer.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.

1. Name / student ID: _____

Signature: _____ Date: _____

2. Name / student ID: _____

Signature: _____ Date: _____

3. Name / student ID: _____

Signature: _____ Date: _____

4. Name / student ID: _____

Signature: _____ Date: _____

5. Name / student ID: _____

Signature: _____ Date: _____

6. Name / student ID: _____

Signature: _____ Date: _____

7. Name / student ID: _____

Signature: _____ Date: _____

8. Name / student ID: _____

Signature: _____ Date: _____

P/W/R identify linked public sources above. NE: not examined in this brief example, not evidence of failure. Support/context labels are provisional, not grades.
