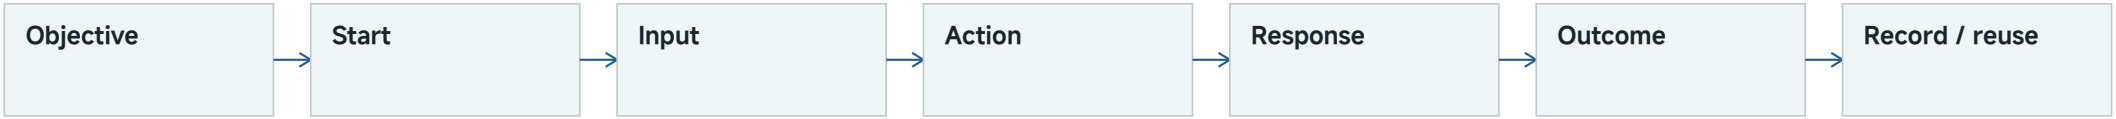
02 / Experience

What interaction data does one episode generate, and how will we use them?

EX07 / Walk These Ways | Source analysis | C1 | P: paper; W: project; R: repository



1. Objective and start

Link the claim, episode start/reset and end rule. Label this episode planned, team-observed or externally reported.

Example: choose a gait/speed, start a traverse, observe movement and end on completion or fall. [W]

2. Input and action

Identify observations, timestamps, commands and executed actions where known. Distinguish command from response.

Robot observations and command parameters produce joint actions; contact and terrain alter the physical response. [R]

3. Response and outcome

Record response, outcome rule, failures, timeouts and interventions. A selected success does not establish reliability.

Record achieved motion, falls, resets and operator tuning; a favorable clip does not reveal all attempts. [W]

4. Record and reuse

List the retained interaction data: observations, actions, responses, outcomes and context. State intended use and missing fields.

Simulated transitions train the controller; new physical traces are needed to quantify deployment reliability. [R]

Review: What could make the recorded outcome misleading? Mark missing measurements or an alternative explanation.

Example response: Operator tuning or selected starts can make a rollout look easier.

Worksheet 2 / Experience - evidence and team review

EX07 / Walk These Ways | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX07 Project: Walk These Ways Claim ID: C1 Revision: draft 1

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: paper sections and public documentation; no dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/abs/2212.03238	Paper: method/results; reported evidence, not our measurement.
W	gmargo11.github.io/walk-these-ways	Project: system/videos; selected examples do not establish reliability.
R	github.com/Improbable-AI/walk-these-ways	Repository: documented route; code and data not executed or audited.

Next action / owner / verification:

Operator tuning or selected starts can make a rollout look easier. Reviewer: inspect the cited basis before adapting this answer.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.

1. Name / student ID: _____

Signature: _____ Date: _____

2. Name / student ID: _____

Signature: _____ Date: _____

3. Name / student ID: _____

Signature: _____ Date: _____

4. Name / student ID: _____

Signature: _____ Date: _____

5. Name / student ID: _____

Signature: _____ Date: _____

6. Name / student ID: _____

Signature: _____ Date: _____

7. Name / student ID: _____

Signature: _____ Date: _____

8. Name / student ID: _____

Signature: _____ Date: _____

P/W/R identify linked public sources above. NE: not examined in this brief example, not evidence of failure. Support/context labels are provisional, not grades.
