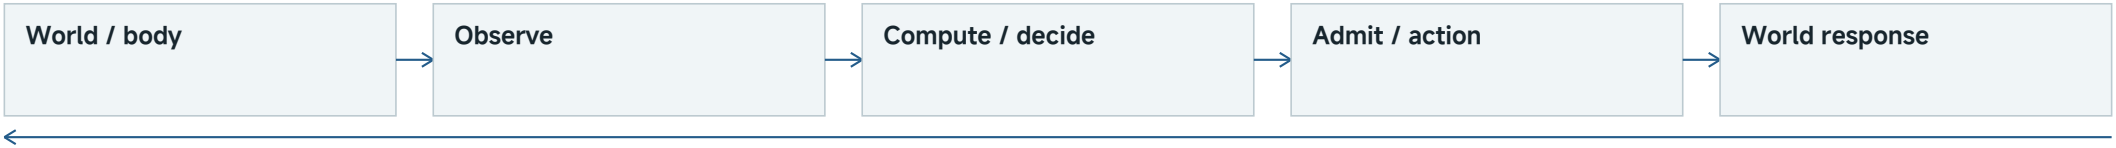
03 / System

What system produces that interaction?

EX02 / UMI | Source analysis | C1 | P: paper; W: project; R: repository



Feedback, operator enable/stop/recovery and evidence recording cross the loop.

1. World and observations

Draw embodiment/environment and sensing. Mark frames, measured quantities and implemented versus planned components.

GoPro-equipped gripper collects data; a robot arm and gripper execute the learned policy. [P Hardware]

2. Decision and action

Connect observations to computation/control and action. Declare action meaning, units, order, rates and limits.

SLAM estimates trajectories; diffusion policy predicts relative end-effector motion and gripper width. [P Policy design]

3. Authority and record

Add operator authority, logging, stop/reset/recovery and configuration ID. Identify evidence kept at each critical interface.

The operator collects demonstrations and supervises deployment; timestamp alignment links separate sensing and execution streams. [P latency]

4. Critical interface evidence

Select one consequential interface. State acceptance criterion, test evidence and result, or pending test with owner.

Next check: compare commanded and measured gripper motion to estimate delay before running the policy. [P App A]

Review: If an interface is late, missing or misordered, how will you detect it and what action is allowed?

Example response: Late commands require time alignment, not only matching coordinate frames.

Worksheet 3 / System - evidence and team review

EX02 / UMI | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX02 Project: UMI Claim ID: C1 Revision: draft 1

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: paper sections and public documentation; no dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/abs/2402.10329v1	Paper: method/results; reported evidence, not our measurement.
W	real.stanford.edu/umi	Project: system/videos; selected examples do not establish reliability.
R	github.com/real-stanford/universal_manipulation_interface	Repository: documented route; code and data not executed or audited.

Next action / owner / verification:

Late commands require time alignment, not only matching coordinate frames. Reviewer: inspect the cited basis before adapting this answer.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.

1. Name / student ID: _____

Signature: _____ Date: _____

2. Name / student ID: _____

Signature: _____ Date: _____

3. Name / student ID: _____

Signature: _____ Date: _____

4. Name / student ID: _____

Signature: _____ Date: _____

5. Name / student ID: _____

Signature: _____ Date: _____

6. Name / student ID: _____

Signature: _____ Date: _____

7. Name / student ID: _____

Signature: _____ Date: _____

8. Name / student ID: _____

Signature: _____ Date: _____

P/W/R identify linked public sources above. NE: not examined in this brief example, not evidence of failure. Support/context labels are provisional, not grades.
