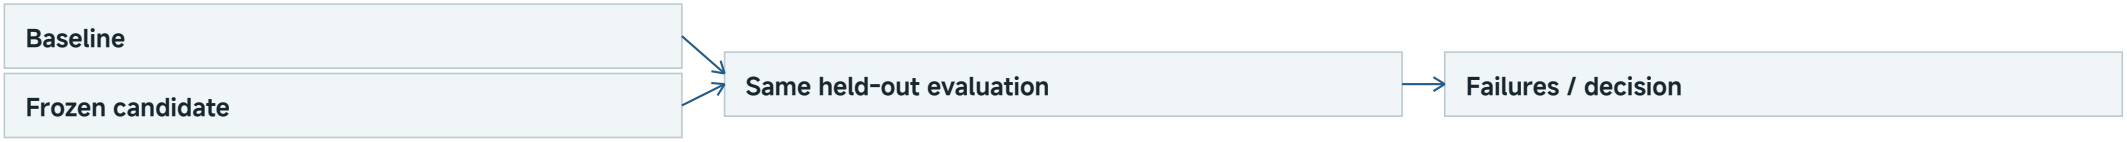
05 / Learning

How is experience used, and what contribution is supported?

EX06 / NeuralFeels | Source analysis | C1 | P: paper; W: project; R: repository



1. Role of experience

State how interaction data support training, inference, evaluation or design. No new training is required; explain your scope.

A pretrained tactile model estimates depth; object neural fields are fitted online during perception. [P 4; S2]

2. Data and independence

Identify data origin, selection and development/test groups. Keep related episodes together; disclose tuning or leakage.

Keep tactile-model training data distinct from FeelSight evaluation sequences and per-object online fitting. [P 4.3; S2]

3. Comparison and limits

Compare frozen methods or data strategies under matched conditions and budgets. Include denominators and all failure outcomes.

Combined sensing improves reported tracking under occlusion relative to vision-only processing of the evaluated interactions. [P 2.4]

4. Supported contribution

Retain, revise or reject the bounded contribution. No improvement is valid; an unfinished evaluation is not a negative result.

Support improved perception in tested settings; better tracking alone does not establish improved autonomous task success. [P Discussion]

Review: Would the apparent improvement survive the same reset, action limits and trial budget for both methods?

Example response: Compare modalities on identical sequences and reference estimates.

Worksheet 5 / Learning - evidence and team review

EX06 / NeuralFeels | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX06 Project: NeuralFeels Claim ID: C1 Revision: draft 1

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: paper sections and public documentation; no dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/abs/2312.13469v1	Paper: method/results; reported evidence, not our measurement.
W	suddhu.github.io/neural-feels	Project: system/videos; selected examples do not establish reliability.
R	github.com/facebookresearch/neuralfeels	Repository: documented route; code and data not executed or audited.

Next action / owner / verification:

Compare modalities on identical sequences and reference estimates. Reviewer: inspect the cited basis before adapting this answer.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.

1. Name / student ID: _____

Signature: _____ Date: _____

2. Name / student ID: _____

Signature: _____ Date: _____

3. Name / student ID: _____

Signature: _____ Date: _____

4. Name / student ID: _____

Signature: _____ Date: _____

5. Name / student ID: _____

Signature: _____ Date: _____

6. Name / student ID: _____

Signature: _____ Date: _____

7. Name / student ID: _____

Signature: _____ Date: _____

8. Name / student ID: _____

Signature: _____ Date: _____

P/W/R identify linked public sources above. NE: not examined in this brief example, not evidence of failure. Support/context labels are provisional, not grades.
