01 / Claim

What capability are we testing, under which conditions?

EX01 / ALOHA / ACT | Source analysis | C1 | P: paper; W: project; R: repository

ACT supports physical Open Cup completion under the reported task setup; compare against BeT, not arm motion alone.

1. System and capability

Name your system, tested capability and physical mechanism. Separate your proposed claim from published results.

Two follower arms tip, grasp and open a condiment cup; ACT predicts joint-target chunks from RGB and joint states. [P III-IV; Fig 5]

2. Conditions and boundary

State task, configuration, conditions and exclusions. Use Project development for your own final project.

Physical Open Cup; cup starts upright along the reported 15 cm placement line. A lid opened by the robot is the final outcome. [P V; Fig 5]

3. Measure and comparison

Define measure, units, trial unit, criterion and comparator before evaluation. Label proposed versus observed values.

Reported final success: ACT 84%, BeT 0% [P Table II]. Real evaluation uses one training seed and 25 attempts/method [P VI].

4. Purpose and next test

Select one feasible pilot and check resources/access. State what outcome would challenge the claim; results may be pending.

Offline pilot: extract Open Cup stage rates and trial protocol before choosing a reproduction. Pass: both methods, final outcome and denominator recorded. [P V-VI]

Review: Could your system work as shown while your claim is still false? Write one such outcome.

Example response: Arm movement could succeed while the lid stays closed; use final lid opening as the outcome.

Worksheet 1 / Claim – evidence and team review

EX01 / ALOHA / ACT | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX01 Project: ALOHA / ACT Claim ID: C1 Revision: draft 2

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: selected paper text/tables checked 20 Oct 2026; no raw dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/html/2304.13705v1	Paper: method/results; reported evidence, not our measurement.
W	tonyzhaozh.github.io/aloha	Project: system/videos; selected examples do not establish reliability.
R	github.com/tonyzhaozh/act	Repository: linked route; code, raw data and current commit not audited.

Next action / owner / verification:

Analyst: record Table II Open Cup stage rates and the real-trial denominator; verify both methods use the same outcome.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.
