01 / Claim

What capability are we testing, under which conditions?

EX04 / BridgeData V2 | Source analysis | C1 | P: paper; W: project; R: repository

For one unseen marker-to-bowl task, broader-skill GCBC training improves reported success at approximately matched dataset size.

1. System and capability

Name your system, tested capability and physical mechanism. Separate your proposed claim from published results.

WidowX demonstrations train goal-conditioned behavior cloning (GCBC). Focus on skill diversity, not all language understanding or all learning methods. [P Table 6]

2. Conditions and boundary

State task, configuration, conditions and exclusions. Use Project development for your own final project.

Unseen task: put marker in bowl. Compare training on 3 versus 13 skills while approximately matching trajectory count. [P Table 6]

3. Measure and comparison

Define measure, units, trial unit, criterion and comparator before evaluation. Label proposed versus observed values.

Reported GCBC success: 0.30 versus 0.65, 20 trials/policy; +35 percentage points. Unit: physical task attempt. [P Table 6]

4. Purpose and next test

Select one feasible pilot and check resources/access. State what outcome would challenge the claim; results may be pending.

Offline pilot: trace Table 6 to skill membership and data-size matching. Pass: both training populations, held-out task and denominator explicit; no new training required.

Review: Could your system work as shown while your claim is still false? Write one such outcome.

Example response: A dataset can be large while this unseen placement fails; use the selected task rather than total trajectories.

Worksheet 1 / Claim – evidence and team review

EX04 / BridgeData V2 | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX04 Project: BridgeData V2 Claim ID: C1 Revision: draft 2

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: selected paper text/tables checked 20 Oct 2026; no raw dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/html/2308.12952v1	Paper: method/results; reported evidence, not our measurement.
W	bridgedata-v2.github.io	Project: system/videos; selected examples do not establish reliability.
R	github.com/rail-berkeley/bridge_data_v2	Repository: linked route; code, raw data and current commit not audited.

Next action / owner / verification:

Analyst: extract Table 6 task, skill sets, size-matching statement and 20-trial protocol; verify all four together.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.

1. Name / student ID: _____

Signature: _____ Date: _____

2. Name / student ID: _____
