01 / Claim

What capability are we testing, under which conditions?

EX05 / LEAP Hand | Source analysis | C1 | P: paper; W: project; R: repository

LEAP v1 supports VideoDex-based learned picking; the reported test-task comparison favors LEAP over Allegro under that workflow.

1. System and capability

Name your system, tested capability and physical mechanism. Separate your proposed claim from published results.

Choose VideoDex Pick, not teleoperation or blind cube rotation. Video pretraining plus mapped Allegro demonstrations trains hand policies. [P VI-C; Table VI]

2. Conditions and boundary

State task, configuration, conditions and exclusions. Use Project development for your own final project.

Original LEAP v1 versus Allegro; keep Pick train/test conditions distinct. Object identities, test-attempt counts and raw trial records are NE in this brief extraction.

3. Measure and comparison

Define measure, units, trial unit, criterion and comparator before evaluation. Label proposed versus observed values.

Table VI Pick success: test 0.84 LEAP versus 0.75 Allegro; train 0.92 versus 0.81. These are success fractions, not motor or rotation metrics.

4. Purpose and next test

Select one feasible pilot and check resources/access. State what outcome would challenge the claim; results may be pending.

Offline pilot: inspect Table VI and the VideoDex data route. Pass: the learner, mapped demonstrations and test-object boundary are identified; do not infer 84/100 trials.

Review: Could your system work as shown while your claim is still false? Write one such outcome.

Example response: Hardware cost or finger motion cannot establish learned Pick success; use the Table VI test outcome.

Worksheet 1 / Claim – evidence and team review

EX05 / LEAP Hand | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX05 Project: LEAP Hand Claim ID: C1 Revision: draft 2

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: selected paper text/tables checked 20 Oct 2026; no raw dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/html/2309.06440v1	Paper: method/results; reported evidence, not our measurement.
W	v1.leaphand.com	Project: system/videos; selected examples do not establish reliability.
R	github.com/leap-hand/LEAP_Hand_API	Repository: linked route; code, raw data and current commit not audited.

Next action / owner / verification:

Analyst: check Table VI Pick train/test fractions and VI-C data origin; keep missing test counts explicitly NE.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.
