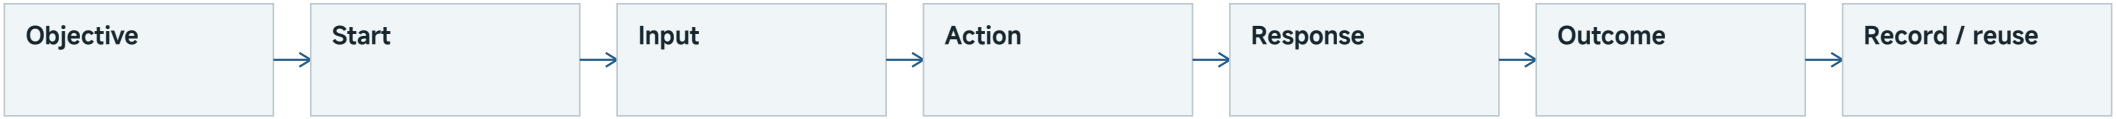
02 / Experience

What interaction data does one episode generate, and how will we use them?

EX01 / ALOHA / ACT | Source analysis | C1 | P: paper; W: project; R: repository



1. Objective and start

Link the claim, episode start/reset and end rule. Label this episode planned, team-observed or externally reported.

Reconstructed reported episode: upright cup; tip, grasp, pry lid; end at final outcome or failed attempt. Timeout details: not extracted. [P V; Fig 5]

2. Input and action

Identify observations, timestamps, commands and executed actions where known. Distinguish command from response.

Four RGB views, follower joint observations and leader-derived targets at 50 Hz. Targets are requests, not measured follower motion. [P III,V]

3. Response and outcome

Record response, outcome rule, failures, timeouts and interventions. A selected success does not establish reliability.

Score lid opening separately from tipping/grasping; ACT reaches 100/96/84% at those stages. Failed stages must remain in accounting. [P Table II]

4. Record and reuse

List the retained interaction data: observations, actions, responses, outcomes and context. State intended use and missing fields.

Open Cup training: 50 demonstrations; evaluation: 25 attempts/method, one seed. Preserve task ID, reset, stages and interventions; do not merge training/test counts. [P V-VI]

Review: What could make the recorded outcome misleading? Mark missing measurements or an alternative explanation.

Example response: Training demonstrations and evaluation attempts are different populations; selected successful clips cannot supply a denominator.

Worksheet 2 / Experience - evidence and team review

EX01 / ALOHA / ACT | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX01 Project: ALOHA / ACT Claim ID: C1 Revision: draft 2

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: selected paper text/tables checked 20 Oct 2026; no raw dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/html/2304.13705v1	Paper: method/results; reported evidence, not our measurement.
W	tonyzhaozh.github.io/aloha	Project: system/videos; selected examples do not establish reliability.
R	github.com/tonyzhaozh/act	Repository: linked route; code, raw data and current commit not audited.

Next action / owner / verification:

Analyst: inspect one Open Cup episode if accessible; verify target/observation indices; otherwise retain NE for raw records.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.

1. Name / student ID: _____

Signature: _____ Date: _____

2. Name / student ID: _____

Signature: _____ Date: _____

3. Name / student ID: _____

Signature: _____ Date: _____

4. Name / student ID: _____

Signature: _____ Date: _____

5. Name / student ID: _____

Signature: _____ Date: _____

6. Name / student ID: _____

Signature: _____ Date: _____

7. Name / student ID: _____

Signature: _____ Date: _____

8. Name / student ID: _____

Signature: _____ Date: _____

P/W/R identify linked public sources above. NE: not examined in this brief example, not evidence of failure. Support/context labels are provisional, not grades.
