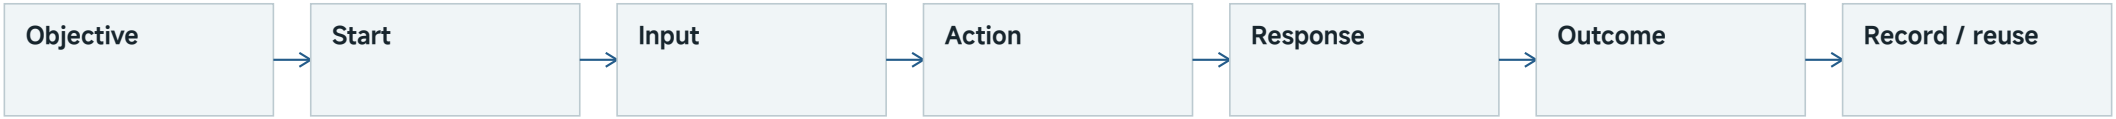
02 / Experience

What interaction data does one episode generate, and how will we use them?

EX04 / BridgeData V2 | Source analysis | C1 | P: paper; W: project; R: repository



1. Objective and start

Link the claim, episode start/reset and end rule. Label this episode planned, team-observed or externally reported.

Reconstructed marker-to-bowl attempt: reset marker/bowl, execute policy and judge placement. Start/end details beyond the paper task description remain NE. [P Experiments]

2. Input and action

Identify observations, timestamps, commands and executed actions where known. Distinguish command from response.

Episode includes RGB, action and goal/instruction context; depth and extra views exist only for some data. Verify the selected subset's actual channels. [P Fig 1; R]

3. Response and outcome

Record response, outcome rule, failures, timeouts and interventions. A selected success does not establish reliability.

Evaluate marker in bowl, not gripper pose or goal-image resemblance. Keep failed attempts among the 20 trials per policy. [P Table 6]

4. Record and reuse

List the retained interaction data: observations, actions, responses, outcomes and context. State intended use and missing fields.

Training uses 3- or 13-skill data at approximately matched sizes; evaluation uses an unseen task. Preserve subset/processing IDs so raw and converted episodes remain linked. [P Table 6; R]

Review: What could make the recorded outcome misleading? Mark missing measurements or an alternative explanation.

Example response: Do not imply all records include depth or that future failure recording describes the historical training release.

Worksheet 2 / Experience - evidence and team review

EX04 / BridgeData V2 | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX04 Project: BridgeData V2 Claim ID: C1 Revision: draft 2

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: selected paper text/tables checked 20 Oct 2026; no raw dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/html/2308.12952v1	Paper: method/results; reported evidence, not our measurement.
W	bridgedata-v2.github.io	Project: system/videos; selected examples do not establish reliability.
R	github.com/rail-berkeley/bridge_data_v2	Repository: linked route; code, raw data and current commit not audited.

Next action / owner / verification:

Analyst: inspect one subset episode; record real channels and raw-to-processed identity; do not assume depth exists.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.

1. Name / student ID: _____

Signature: _____ Date: _____

2. Name / student ID: _____

Signature: _____ Date: _____

3. Name / student ID: _____

Signature: _____ Date: _____

4. Name / student ID: _____

Signature: _____ Date: _____

5. Name / student ID: _____

Signature: _____ Date: _____

6. Name / student ID: _____

Signature: _____ Date: _____

7. Name / student ID: _____

Signature: _____ Date: _____

8. Name / student ID: _____

Signature: _____ Date: _____

P/W/R identify linked public sources above. NE: not examined in this brief example, not evidence of failure. Support/context labels are provisional, not grades.
