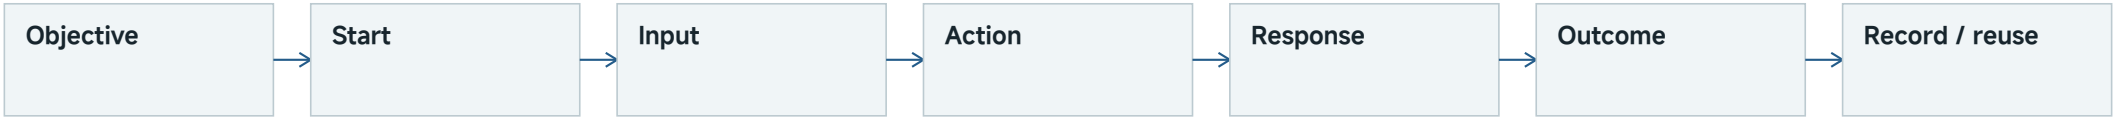
02 / Experience

What interaction data does one episode generate, and how will we use them?

EX03 / DROID | Source analysis | C1 | P: paper; W: project; R: repository



1. Objective and start

Link the claim, episode start/reset and end rule. Label this episode planned, team-observed or externally reported.

Reconstructed Waffle Maker episode: vary appliance pose; command closure; end with a labelled outcome. Exact timeout/termination details: not extracted. [P V; App E]

2. Input and action

Identify observations, timestamps, commands and executed actions where known. Distinguish command from response.

Retain camera streams, robot state, absolute end-effector actions, collector/task IDs and calibration IDs; do not equate actions with observed motion. [P App B,V]

3. Response and outcome

Record response, outcome rule, failures, timeouts and interventions. A selected success does not establish reliability.

Collector success is a label, not independent truth. Keep ambiguous labels and unsuccessful collection records distinct from successful-only co-training data. [P III,V]

4. Record and reuse

List the retained interaction data: observations, actions, responses, outcomes and context. State intended use and missing fields.

Each downstream setting uses 10 rollouts/method; training mixtures exclude unsuccessful trajectories. Preserve that selection rule when interpreting generalization. [P V]

Review: What could make the recorded outcome misleading? Mark missing measurements or an alternative explanation.

Example response: A collector label and a failed-trajectory filter can change the usable population without changing robot hardware.

Worksheet 2 / Experience - evidence and team review

EX03 / DROID | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX03 Project: DROID Claim ID: C1 Revision: draft 2

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: selected paper text/tables checked 20 Oct 2026; no raw dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/html/2403.12945v1	Paper: method/results; reported evidence, not our measurement.
W	droid-dataset.github.io	Project: system/videos; selected examples do not establish reliability.
R	github.com/droid-dataset/droid	Repository: linked route; code, raw data and current commit not audited.

Next action / owner / verification:

Analyst: inspect one collector-labelled episode and calibration ID; flag ambiguous labels and failed-data filtering.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.

1. Name / student ID: _____

Signature: _____ Date: _____

2. Name / student ID: _____

Signature: _____ Date: _____

3. Name / student ID: _____

Signature: _____ Date: _____

4. Name / student ID: _____

Signature: _____ Date: _____

5. Name / student ID: _____

Signature: _____ Date: _____

6. Name / student ID: _____

Signature: _____ Date: _____

7. Name / student ID: _____

Signature: _____ Date: _____

8. Name / student ID: _____

Signature: _____ Date: _____

P/W/R identify linked public sources above. NE: not examined in this brief example, not evidence of failure. Support/context labels are provisional, not grades.
