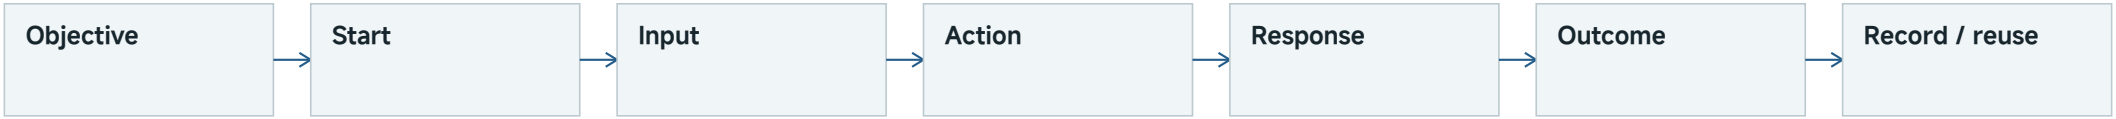
02 / Experience

What interaction data does one episode generate, and how will we use them?

EX05 / LEAP Hand | Source analysis | C1 | P: paper; W: project; R: repository



1. Objective and start

Link the claim, episode start/reset and end rule. Label this episode planned, team-observed or externally reported.

Reconstructed picking attempt: object starts on the surface; learned policy grasps/lifts; judge the reported task outcome. Exact timeout/reset protocol remains NE. [P VI-C]

2. Input and action

Identify observations, timestamps, commands and executed actions where known. Distinguish command from response.

Demonstration actions originate on Allegro and are mapped to LEAP; video pretraining is a separate source. Object lift requires observation beyond joint targets. [P VI-C]

3. Response and outcome

Record response, outcome rule, failures, timeouts and interventions. A selected success does not establish reliability.

Count task failures separately from hand movement. Table VI reports Pick train/test fractions; the trial denominator was not extracted and must remain unknown.

4. Record and reuse

List the retained interaction data: observations, actions, responses, outcomes and context. State intended use and missing fields.

Preserve video-pretraining, mapped demonstrations and evaluation as separate records. This is not a newly collected LEAP-only dataset and not our executed trial. [P VI-C]

Review: What could make the recorded outcome misleading? Mark missing measurements or an alternative explanation.

Example response: Imported demonstrations and video pretraining are different sources, not fresh LEAP-only trials.

Worksheet 2 / Experience - evidence and team review

EX05 / LEAP Hand | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX05 Project: LEAP Hand Claim ID: C1 Revision: draft 2

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: selected paper text/tables checked 20 Oct 2026; no raw dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/html/2309.06440v1	Paper: method/results; reported evidence, not our measurement.
W	v1.leaphand.com	Project: system/videos; selected examples do not establish reliability.
R	github.com/leap-hand/LEAP_Hand_API	Repository: linked route; code, raw data and current commit not audited.

Next action / owner / verification:

Analyst: trace one mapped Allegro demonstration if available; verify its origin before describing LEAP experience.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.

1. Name / student ID: _____

Signature: _____ Date: _____

2. Name / student ID: _____

Signature: _____ Date: _____

3. Name / student ID: _____

Signature: _____ Date: _____

4. Name / student ID: _____

Signature: _____ Date: _____

5. Name / student ID: _____

Signature: _____ Date: _____

6. Name / student ID: _____

Signature: _____ Date: _____

7. Name / student ID: _____

Signature: _____ Date: _____

8. Name / student ID: _____

Signature: _____ Date: _____

P/W/R identify linked public sources above. NE: not examined in this brief example, not evidence of failure. Support/context labels are provisional, not grades.
