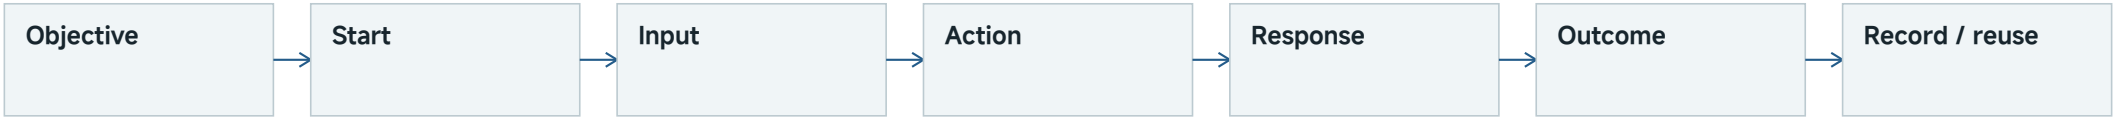
02 / Experience

What interaction data does one episode generate, and how will we use them?

EX06 / NeuralFeels | Source analysis | C1 | P: paper; W: project; R: repository



1. Objective and start

Link the claim, episode start/reset and end rule. Label this episode planned, team-observed or externally reported.

Reported sequence: object placed between fingertips; fixed exploration policy rotates it; sensing continues for a 30 s trial. End-of-sequence reconstruction is evaluated. [P 4.3]

2. Input and action

Identify observations, timestamps, commands and executed actions where known. Distinguish command from response.

RGB-D, four DIGIT streams and 16 joint angles situate contacts; object pose is estimated, not a commanded action or independent measurement. [P 4.2; Fig 7]

3. Response and outcome

Record response, outcome rule, failures, timeouts and interventions. A selected success does not establish reliability.

SLAM failure: mean pose drift above the paper's 10 mm threshold. Preserve lost tracks and interventions, not only surviving reconstructions. [P 2.2; Fig 3c]

4. Record and reuse

List the retained interaction data: observations, actions, responses, outcomes and context. State intended use and missing fields.

70 sequences: 40 simulated, 30 physical; five estimation seeds/sequence. These are not 350 newly collected independent physical trials. Preserve sensor time/transform IDs. [P Fig 3]

Review: What could make the recorded outcome misleading? Mark missing measurements or an alternative explanation.

Example response: Five estimation seeds replaying one sequence are not five independent physical acquisitions.

Worksheet 2 / Experience - evidence and team review

EX06 / NeuralFeels | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX06 Project: NeuralFeels Claim ID: C1 Revision: draft 2

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: selected paper text/tables checked 20 Oct 2026; no raw dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/html/2312.13469v1	Paper: method/results; reported evidence, not our measurement.
W	suddhu.github.io/neural-feels	Project: system/videos; selected examples do not establish reliability.
R	github.com/facebookresearch/neuralfeels	Repository: linked route; code, raw data and current commit not audited.

Next action / owner / verification:

Analyst: inspect one 30 s contact sequence; verify timestamps, frame IDs and the 10 mm tracking-failure rule.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.

1. Name / student ID: _____

Signature: _____ Date: _____

2. Name / student ID: _____
