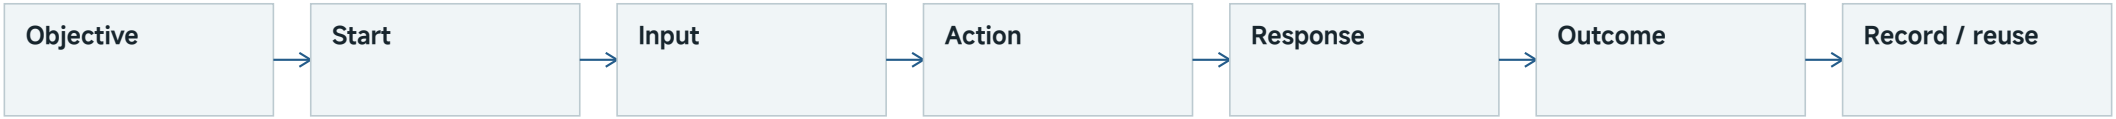
02 / Experience

What interaction data does one episode generate, and how will we use them?

EX02 / UMI | Source analysis | C1 | P: paper; W: project; R: repository



1. Objective and start

Link the claim, episode start/reset and end rule. Label this episode planned, team-observed or externally reported.

Reported episode: objects start on the table; robot picks/tosses them toward designated bins. Object outcomes and episode termination are separate. [P V-B; App A-C]

2. Input and action

Identify observations, timestamps, commands and executed actions where known. Distinguish command from response.

GoPro video/IMU support estimated gripper pose and width; policy uses relative end-effector motion. Reconstructed demonstration pose is not robot joint response. [P Hardware; Fig 5]

3. Response and outcome

Record response, outcome rule, failures, timeouts and interventions. A selected success does not establish reliability.

Count each object reaching its correct bin under the authors' judging rule; retain misses, retries and operator termination. 120 outcomes are not 120 independent episodes. [P V-B; App A-C]

4. Record and reuse

List the retained interaction data: observations, actions, responses, outcomes and context. State intended use and missing fields.

Training uses 280 demonstration episodes; evaluation reports 120 object outcomes/condition. Preserve reconstruction rejection reasons and clock metadata; no raw sessions audited here. [P V-B; R]

Review: What could make the recorded outcome misleading? Mark missing measurements or an alternative explanation.

Example response: Rejected reconstructions and retried objects can bias usable-data and success counts; preserve both populations.

Worksheet 2 / Experience - evidence and team review

EX02 / UMI | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX02 Project: UMI Claim ID: C1 Revision: draft 2

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: selected paper text/tables checked 20 Oct 2026; no raw dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/html/2402.10329v3	Paper: method/results; reported evidence, not our measurement.
W	real.stanford.edu/umi	Project: system/videos; selected examples do not establish reliability.
R	github.com/real-stanford/universal_manipulation_interface	Repository: linked route; code, raw data and current commit not audited.

Next action / owner / verification:

Analyst: follow one session through reconstruction/filtering; record rejection reason and separate robot object outcomes.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.

1. Name / student ID: _____

Signature: _____ Date: _____

2. Name / student ID: _____
