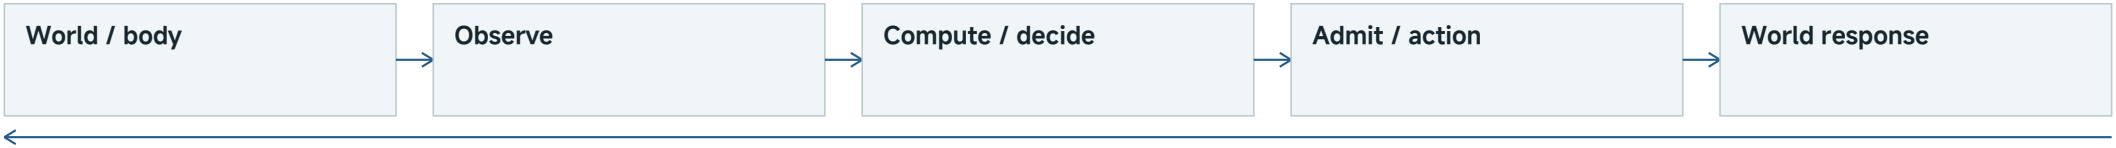
03 / System

What system produces that interaction?

EX02 / UMI | Source analysis | C1 | P: paper; W: project; R: repository



Feedback, operator enable/stop/recovery and evidence recording cross the loop.

1. World and observations

Draw embodiment/environment and sensing. Mark frames, measured quantities and implemented versus planned components.

GoPro-equipped gripper collects; arm/gripper deploys the policy. Keep collection SLAM and deployment robot-base frames distinct. [P Hardware; Fig 5]

2. Decision and action

Connect observations to computation/control and action. Declare action meaning, units, order, rates and limits.

Relative pose plus gripper width define action; tossing runs at 20 Hz. Proposed audit units: position m, angle rad, time s; native encoding/order must be verified. [P App A-D]

3. Authority and record

Add operator authority, logging, stop/reset/recovery and configuration ID. Identify evidence kept at each critical interface.

Operator collects, supervises and terminates trials. Measured stream delays govern alignment; exact stop/limits and raw delay traces remain NE here. [P Fig 5; App A]

4. Critical interface evidence

Select one consequential interface. State acceptance criterion, test evidence and result, or pending test with owner.

Proposed offline pass: all observation/action clocks and measured delays documented, no negative action lead time after alignment; reject ambiguous clocks. Analyst checks before any deployment.

Review: If an interface is late, missing or misordered, how will you detect it and what action is allowed?

Example response: Frames and clocks solve different problems; reject an action with unclear reference or timing.

Worksheet 3 / System – evidence and team review

EX02 / UMI | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX02 Project: UMI Claim ID: C1 Revision: draft 2

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: selected paper text/tables checked 20 Oct 2026; no raw dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/html/2402.10329v3	Paper: method/results; reported evidence, not our measurement.
W	real.stanford.edu/umi	Project: system/videos; selected examples do not establish reliability.
R	github.com/real-stanford/universal_manipulation_interface	Repository: linked route; code, raw data and current commit not audited.

Next action / owner / verification:

Analyst: map each stream clock and measured delay; pass only when observation/action alignment is unambiguous.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.
