04 / Grounding

What connects the representation or interpretation to physical evidence?

EX08 / DayDreamer | Source analysis | C1 | P: paper; W: project; R: repository

Prediction / representation	Matched reference	Difference / ambiguity	Conclusion / scope limit

1. Comparison boundary

Name the prediction/measurement and reference. Match conditions; identify simulated versus physical evidence.

Compare physical A1 behavior and learning curves, not predicted images alone. Dreamer and SAC are the stated locomotion methods. [P 3.1; Fig 2]

2. Quantities and validity

Declare quantity, units, frame, tolerance and measurement limits. Distinguish a chosen tolerance from observed uncertainty.

Training time in hours and task reward are distinct from walk success probability. Fig 2 is one run; its shaded variability is within time bins, not seed uncertainty.

3. Results and uncertainty

Give paired outcomes, trial counts and uncertainty or limits. If untested, record the protocol and missing evidence explicitly.

Reported: Dreamer rolls/stands/walks near 1 h; SAC rolls but does not stand/walk in the comparison. SAC deadlock assistance and Dreamer boundary interventions must remain visible. [P 3.1]

4. Interpretation and challenge

Bound the conclusion and consider another cause of the difference. Choose a diagnostic test or scope restriction.

Different assistance, filtering, wear or time accounting could affect the contrast. A future repeat should log interventions and repairs, with a fixed walking criterion and budget. [P Limitations]

Review: Could sensing error, reset differences or selection explain the discrepancy instead of model error?

Example response: One training curve and within-bin spread cannot establish across-seed uncertainty.

Worksheet 4 / Grounding – evidence and team review

EX08 / DayDreamer | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX08 Project: DayDreamer Claim ID: C1 Revision: draft 2

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: selected paper text/tables checked 20 Oct 2026; no raw dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/html/2206.14176v1	Paper: method/results; reported evidence, not our measurement.
W	danijar.com/project/daydreamer	Project: system/videos; selected examples do not establish reliability.
R	github.com/danijar/daydreamer	Repository: linked route; code, raw data and current commit not audited.

Next action / owner / verification:

Analyst: record within-bin shading and both methods' assistance; do not report the curve as multi-seed evidence.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.
