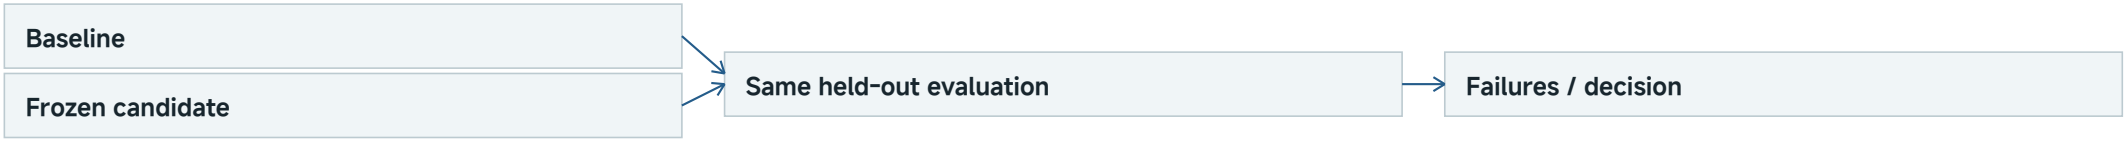
05 / Learning

How is experience used, and what contribution is supported?

EX01 / ALOHA / ACT | Source analysis | C1 | P: paper; W: project; R: repository



1. Role of experience

State how interaction data support training, inference, evaluation or design. No new training is required; explain your scope.

ACT learns action sequences from physical demonstrations; deployment inference does not update weights online. This claim concerns one task, not universal dexterity. [P IV]

2. Data and independence

Identify data origin, selection and development/test groups. Keep related episodes together; disclose tuning or leakage.

Keep 50 Open Cup training demonstrations distinct from 25 evaluation attempts; record any test-time tuning and reset matching. Raw train/test episode IDs remain NE. [P V-VI]

3. Comparison and limits

Compare frozen methods or data strategies under matched conditions and budgets. Include denominators and all failure outcomes.

Open Cup final success is 84% ACT versus 0% BeT. This is a method comparison; isolate chunking with the separate ablation, not this table alone. [P Table II; Fig 7]

4. Supported contribution

Retain, revise or reject the bounded contribution. No improvement is valid; an unfinished evaluation is not a negative result.

Retain bounded Open Cup learning evidence. Analyst next checks Fig 7 for chunk size and temporal-ensemble conditions before attributing the entire gain to chunking.

Review: Would the apparent improvement survive the same reset, action limits and trial budget for both methods?

Example response: Table II compares full methods; Fig 7 is needed to isolate chunking. Do not claim every ACT gain is caused by chunking.

Worksheet 5 / Learning - evidence and team review

EX01 / ALOHA / ACT | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX01 Project: ALOHA / ACT Claim ID: C1 Revision: draft 2

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: selected paper text/tables checked 20 Oct 2026; no raw dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/html/2304.13705v1	Paper: method/results; reported evidence, not our measurement.
W	tonyzhaozh.github.io/aloha	Project: system/videos; selected examples do not establish reliability.
R	github.com/tonyzhaozh/act	Repository: linked route; code, raw data and current commit not audited.

Next action / owner / verification:

Analyst: inspect Fig 7 ablation settings; distinguish the chunking test from the ACT-versus-BeT result.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.
