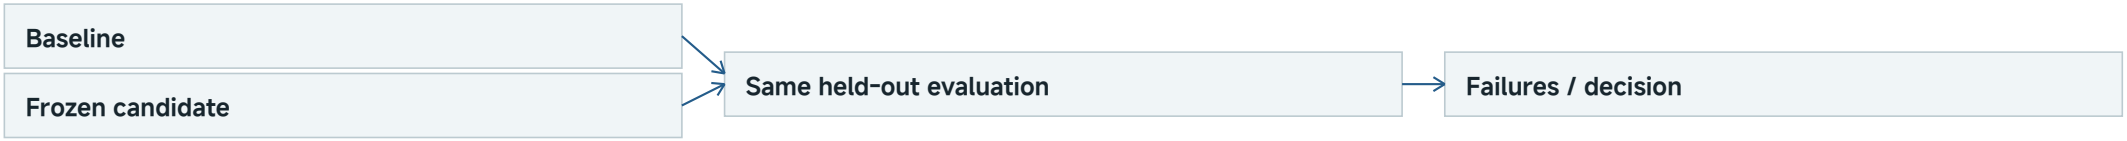
05 / Learning

How is experience used, and what contribution is supported?

EX03 / DROID | Source analysis | C1 | P: paper; W: project; R: repository



1. Role of experience

State how interaction data support training, inference, evaluation or design. No new training is required; explain your scope.

Co-training uses diffusion policies, not a new algorithm. In-domain/DROID batches mix 50/50; unsuccessful trajectories are excluded. [P V; App F]

2. Data and independence

Identify data origin, selection and development/test groups. Keep related episodes together; disclose tuning or leakage.

Keep task/scene partitions and shifts explicit. Compare identical learner settings; dataset diversity, quality and volume remain distinct factors. Exact raw split IDs are NE here. [P V]

3. Comparison and limits

Compare frozen methods or data strategies under matched conditions and budgets. Include denominators and all failure outcomes.

No-co-training and OXE co-training are the baselines; Fig 7 averages six tasks with standard errors. Preserve 10-rollout task-setting denominators and the successful-only filter. [P V]

4. Supported contribution

Retain, revise or reject the bounded contribution. No improvement is valid; an unfinished evaluation is not a negative result.

Support the reported co-training benefit, not a causal claim that every added scene improves every task. Analyst checks one task's outcome table and release identity before reuse.

Review: Would the apparent improvement survive the same reset, action limits and trial budget for both methods?

Example response: Fix learner and accounting first; diversity, quality and volume are still competing explanations.

Worksheet 5 / Learning - evidence and team review

EX03 / DROID | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX03 Project: DROID Claim ID: C1 Revision: draft 2

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: selected paper text/tables checked 20 Oct 2026; no raw dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/html/2403.12945v1	Paper: method/results; reported evidence, not our measurement.
W	droid-dataset.github.io	Project: system/videos; selected examples do not establish reliability.
R	github.com/droid-dataset/droid	Repository: linked route; code, raw data and current commit not audited.

Next action / owner / verification:

Analyst: record mixture, successful-only filter and identical learner settings; do not attribute the entire gain to diversity.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.

1. Name / student ID: _____

Signature: _____ Date: _____

2. Name / student ID: _____

Signature: _____ Date: _____

3. Name / student ID: _____

Signature: _____ Date: _____

4. Name / student ID: _____

Signature: _____ Date: _____

5. Name / student ID: _____

Signature: _____ Date: _____

6. Name / student ID: _____

Signature: _____ Date: _____

7. Name / student ID: _____

Signature: _____ Date: _____

8. Name / student ID: _____

Signature: _____ Date: _____

P/W/R identify linked public sources above. NE: not examined in this brief example, not evidence of failure. Support/context labels are provisional, not grades.
