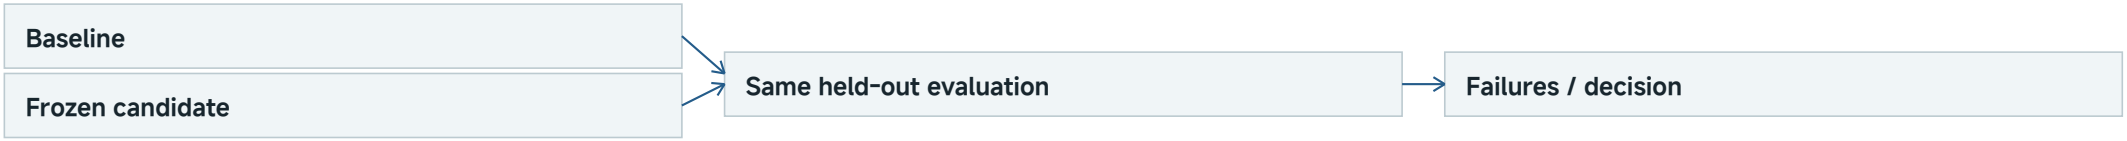
05 / Learning

How is experience used, and what contribution is supported?

EX02 / UMI | Source analysis | C1 | P: paper; W: project; R: repository



1. Role of experience

State how interaction data support training, inference, evaluation or design. No new training is required; explain your scope.

Reconstructed demonstrations train diffusion policy; the timing ablation changes execution alignment with the same learned policy, not weights or data. [P V-B]

2. Data and independence

Identify data origin, selection and development/test groups. Keep related episodes together; disclose tuning or leakage.

Keep the 280 training episodes separate from 120 evaluated object outcomes/condition. Preserve filtering and object/scene identity; exact split IDs were not audited here. [P V-B; R]

3. Comparison and limits

Compare frozen methods or data strategies under matched conditions and budgets. Include denominators and all failure outcomes.

Physical tossing success falls from 87.5% to 57.5% when latency compensation is disabled. Preserve manual termination and release alignment when reproducing the contrast. [P V-B; App A-C]

4. Supported contribution

Retain, revise or reject the bounded contribution. No improvement is valid; an unfinished evaluation is not a negative result.

Retain a timing-sensitive transfer claim for this setup. No claim follows about every robot, direct sunlight, or arbitrary objects; inspect reconstruction failures separately. [P V-B; R]

Review: Would the apparent improvement survive the same reset, action limits and trial budget for both methods?

Example response: Hold policy and data fixed; changing timing is an execution-interface test, not online learning.

Worksheet 5 / Learning - evidence and team review

EX02 / UMI | SOURCE ANALYSIS EXAMPLE | Original review-page layout

Example ID: EX02 Project: UMI Claim ID: C1 Revision: draft 2

Mode: Source analysis Pages: canvas + this review; Decision also includes both A3 sides

Evidence scope: selected paper text/tables checked 20 Oct 2026; no raw dataset download or independent experiment.

Evidence ID	Artifact/source + location (clickable)	What it supports; limitation / access gap
P	arxiv.org/html/2402.10329v3	Paper: method/results; reported evidence, not our measurement.
W	real.stanford.edu/umi	Project: system/videos; selected examples do not establish reliability.
R	github.com/real-stanford/universal_manipulation_interface	Repository: linked route; code, raw data and current commit not audited.

Next action / owner / verification:

Analyst: pin training configuration and confirm only timing changes in the ablation; raw split IDs stay NE if inaccessible.

Teaching example: no actual student team or signatures. Source analysis is not a reproduced result; blank signature fields are intentional.

1. Name / student ID: _____

Signature: _____ Date: _____

2. Name / student ID: _____

Signature: _____ Date: _____

3. Name / student ID: _____

Signature: _____ Date: _____

4. Name / student ID: _____
